Integrated person-centred care for vulnerable groups through a realist lens

Anam Ahmed | Panaxea

EPSO-NET April 3rd, 2024

INTRODUCTION

Introduction

Integrated person-centred care

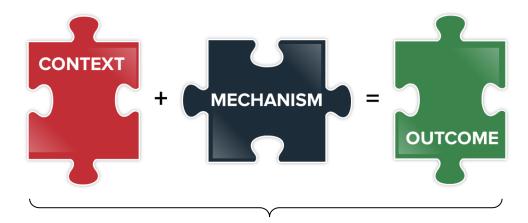

Current issues

- Integrated person-centred care (I-PCC): poorly understood and implemented in practice.
- Existing literature: heterogeneity in outcomes.
- Traditional research only indicates whether
 I-PCC is more effective or not.

Introduction Realist research

- Theory-driven approach
- Explanatory focus
 - Focus on how and why complex programmes thrive or fail, in setting(s)
- Important constructs:

Context-mechanism-outcome (CMO)
configuration

Programme theory

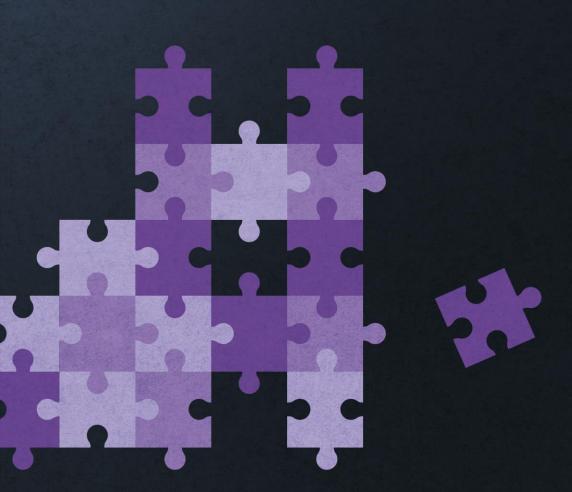

Introduction Study objective

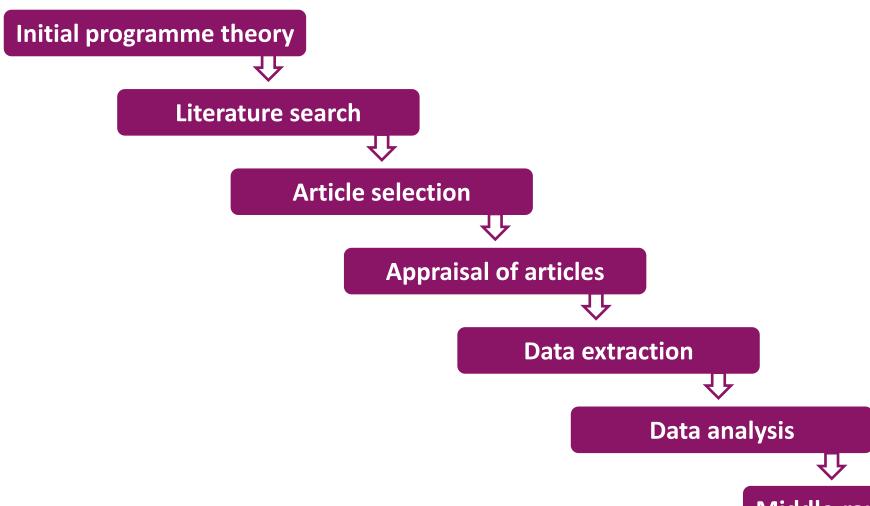

To explain how, why, and in what circumstances I-PCC works (or not) by establishing a programme theory

METHODS 1 RAPID REALIST REVIEW

Methods Rapid realist review

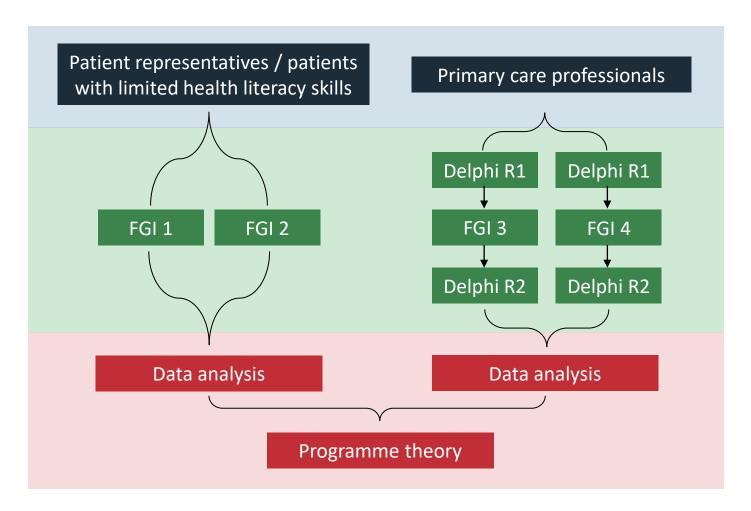

Middle-range programme theory

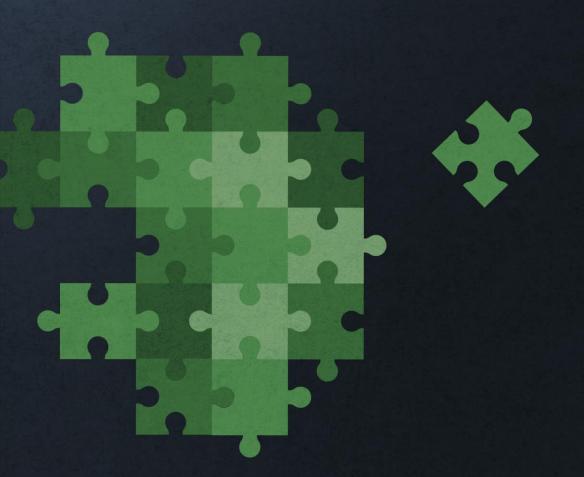

METHODS 2 FOCUS GROUP DISCUSSIONS

Methods Focus group discussions

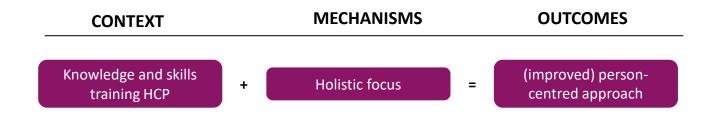

RESULTS

CONTEXT	MECHANISMS	OUTCOMES	
Knowledge and skills training HCP	+ Holistic focus	= (improved) person- centred approach	
Tailored supporting material developed with target group	+ Active role patient Shared decision-making	= Patient involvement	
Awareness social circumstances of patient	Communication + Holistic focus	Satisfaction = (improved) person- centred approach	
Patient education	+ Self-management support	Self-efficacy patient Self-management skills patient Therapy concordance	Items present in middle-range PT Items added to refine PT

HCP: healthcare provider

CONTEXT MECHANISMS OUTCOMES

Communication

Tailored supporting material developed with target group

Communication

Active role patient = Patient involvement

Shared decision-making

HCP: healthcare provider

CONTEXT MECHANISMS OUTCOMES

Sufficient time consult

Awareness social circumstances of patient

Communication

Holistic focus

(improved) personcentred approach

HCP: healthcare provider

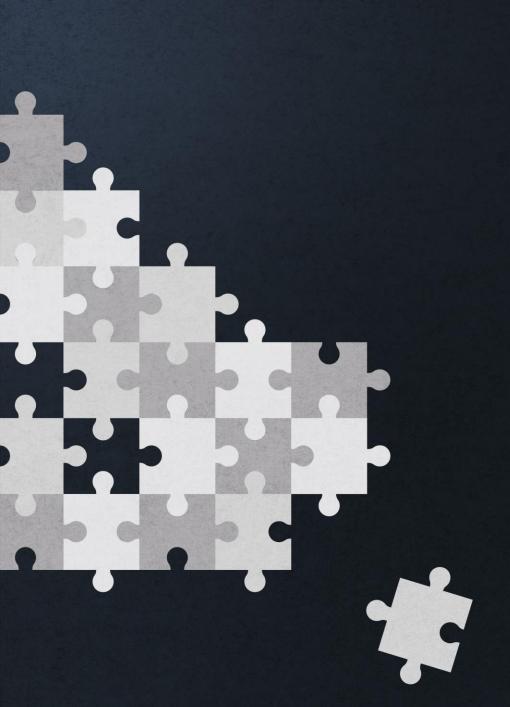

CONTEXT MECHANISMS OUTCOMES

Patient education + Self-management support = Self-management skills patient | HCP: healthcare provider | Items present in middle-range PT | Items added to refine PT |

CONCLUSION AND DISCUSSION

Conclusion and Discussion

Conclusion

- Coherence of items need to be considered to understand effectiveness of PCC in primary care.
- Complex interplay of items relevant to a setting must be met.

Discussion

- Assigning items to constructs (C, M, or O).
- Included studies had incomplete data to construct CMO-configurations.
